

# TracPipe® CounterStrike®

Flexible Gas Piping by OmegaFlex®

All of the safety, ease and performance you've come to expect from OmegaFlex's flexible gas piping – only better.

## Proven Performance

So protect yourself and your customer and specify the safest CSST product in the world!

- TracPipe® CounterStrike® has been shown to be up to 400 times more resistant to the damaging effects of electrical energy than yellow CSST.
- Uses the NEW AutoSnap® fittings that do not require disassembly/reassembly!
- The most complete range of CSST sizes (3/8" - 2") available.
- There are no additional bonding requirements for TracPipe® CounterStrike® imposed by the manufacturer's installation instructions.
- Lays straighter and pulls easier, dramatically decreasing installation times (and saving you time and money in the process).
- Unlike competitive brands, TracPipe® CounterStrike® is non-annealed making it more crush resistant, safer to install and easier to cut.

- TracPipe® CounterStrike® has larger pipe diameters compared to competitive brands, so save money by using a smaller size CounterStrike! (ie 3/8" CounterStrike versus 1/2" other brand).
- Highest overall EHD Flow Capacity Rating.

## Improve your Profit Margins by taking advantage of TracPipe® CounterStrike® highest end flow capacity

2 psi System Single Family Large	Load Mbtu	Length of Tubing	OUR Tube Size	THEIR Tube Size

<b>TOTAL</b>	<b>250</b>			

### Rich Stothers

Service Manager & Partner, *South Florida Gas*

Last year, the company started using CounterStrike exclusively. "The main reason we exclusively use CounterStrike is that Florida is the lightning capital of the world. CounterStrike eliminated all my concerns about lightning. I feel it is the best material in the market."

"At first, we thought that CounterStrike seemed more rigid than yellow pipe, but we actually found that the smooth coating jacket aided us in the installation process, allowing it to flow easier when installing the product."

## Black of the Past

For decades, schedule 40 black iron pipe was the default choice for gas piping. But in the United States, there are about 65 people killed every year in gas explosions. That is why an alternative to black iron pipe was developed—corrugated stainless steel tubing (CSST). First developed in Japan to solve the dangers of broken rigid gas piping in an earthquake, and then brought to the United States by the American Gas Association (AGA) and the Gas Research Institute (GRI) as an alternative gas piping solution, CSST was developed to eliminate the difficulties and dangers of rigid gas piping. **Unlike black iron pipe, not one person has been killed due to defects in CounterStrike® in the United States. In fact, of the approximately 360,000<sup>1</sup> fires in US home structures every year, only 19<sup>2</sup> of these were attributed to CSST and lightning, while over 1000<sup>3</sup> were caused by leaking or broken rigid gas pipes!**

*Rigid pipe presents a variety of **problems**:*

- Rigid pipe breaks in earthquakes, tornados and other natural disasters.
- Multiple joints frequently leak.
- Pipe dope deteriorates over time and leaks when exposed to lightning strikes.
- Black iron pipe is not listed to any national standards for gas piping. **TracPipe® CounterStrike® piping can withstand the same forces of nature—earthquakes, and tornados—that make black iron pipe crack.**
- Most rigid steel pipe is made overseas—with little or no quality control.

## Black to the Future

*Flexible TracPipe® CounterStrike® presents a variety of **solutions**:*

- Bends and conforms by hand.
- Pull gas pipe like electrical wire.
- Saves typically 75% of installation time or more.
- Cuts with a standard tube cutter.
- No threading or welding hassles.
- Unique, patented AutoSnap® fittings require no special tools to seal the first time, every time.
- TracPipe® CounterStrike® weighs a fraction of black iron pipe, for potential workers' compensation savings.
- Combined with 5 PSI. elevated pressure, 2-inch TracPipe® CounterStrike® replaces 5-6 inch black pipe at 14" W.C.
- TracPipe® CounterStrike® is rated for indoor and outdoor use.
- Up to 75% fewer joints than black iron pipe per installation.

## TracPipe® CounterStrike® vs. other Traditional CSST Piping

- Heavy one piece abrasion and lightning resistant jacket, pulls easier and lays straighter decreasing install time.
- Highest Pressure Ratings. Tested by IAS (AGA Labs) for ratings up to 125 PSI working pressure.
- Highest Capacity Ratings (EHD). Higher flow rates can reduce pipe size and save money.
- Uses the NEW AutoSnap® fittings that do not require disassembly or reassembly just TWIST, SNAP, TIGHTEN and you are DONE!
- TracPipe® CounterStrike® offers the largest selection of tee fittings, terminations and metal wall boxes.
- No additional manufacturers bonding required.
- Meets ASTM E84 with respect to flame spread and smoke density. This permits installation in return air plenums.

Lightning can be very unpredictable and strike almost anywhere at any time of day or night! Every year the US is hit by millions of lightning strikes and while only 18% of lightning fires occur in homes, they account for 88% of associated civilian deaths, 77% of associated injuries and 70% of direct property damages!<sup>1</sup>

### Not one person has been killed due to defects in CounterStrike® CSST in the U.S.A.

In 2003 OmegaFlex® began testing its traditional CSST product, to determine the mechanisms by which the CSST could be damaged by electrical arcing.

The company worked with Lightning Technologies Inc., which operates one of the world's most complete, accredited, simulated-lightning test laboratories. LTI works to eliminate lightning hazards in products in various industries, including aerospace, commercial airlines, ground support systems and electrical distribution.

Based on this research, OmegaFlex® then began to develop a conductive CSST jacket that would dissipate the energy from a nearby lightning strike, instead of acting as an insulator.

Simulated lightning test with no product failure

The current version of TracPipe® CounterStrike® has been tested by LTI and was shown to be up to 400 times more resistant to the damaging effects of electrical energy than competitive CSST piping.

No product, including TracPipe® CounterStrike® is immune to damage caused by a direct lightning strike. Refer to NFPA 780 for lightning protection systems for buildings and building systems.

#### Joe Hayes

Vice President, Plumbing Services Division  
Coolray and Mr. Plumber

Coolray and Mr. Plumber has been using CounterStrike from OmegaFlex exclusively for two years because of the extra protection it provides—without the need for additional bonding—while still allowing for significantly reduced installation time. "Any time we're able to reduce labor costs, it's a win-win for the customer and the company," said Hayes.

# All of the safety, ease and performance you've come to expect from OmegaFlex's flexible gas piping – only better.

## HISTORY OF INNOVATION

Since 1975, OmegaFlex® has led the piping industry with its high-quality construction and commitment to exceed the industry's product and safety standards.

- With over 200 patents and counting, the Company's philosophy is not to wait for mandates, but to lead the industry by introducing the best products.
- In 1997, the Company introduced TracPipe®, the finest CSST system on the market that when properly installed makes likelihood of damage to the system from natural occurrences very small.
- In 2004, the Company developed CounterStrike®, which contains all of the innovative features of TracPipe® plus a built-in solution to lightning damage that eliminates the need for additional bonding.

Now in keeping with our continued commitment to innovation and putting the best product on the market, we proudly are transitioning our traditional CSST products exclusively to TracPipe® CounterStrike®.

### Kevin Hoben

CEO, Omega Flex Inc.

"OmegaFlex has been at the forefront of working with the national building code organizations to adopt uniform regulations to protect homes and other structures from lightning damage," noted Mr. Hoben. "We believe that starts with a requirement that all metallic systems in the home be bonded together, which includes all gas piping systems. Until the day that equipotential bonding becomes the national standard, our TracPipe CounterStrike product eliminates the need for additional bonding of CSST systems, making homes safer and a professional installer's job much easier. Through TracPipe CounterStrike, we have developed a comprehensive solution to the several challenges in product design and code compliance."

## WORKING TOWARDS A NEW STANDARD IN CSST

TracPipe® CounterStrike® exceeds all industry product and safety requirements – it is simply the best product on the market. Inconsistencies in the model building codes regarding bonding and grounding led us to create a product that eliminates the need for additional bonding – providing the preeminent product on the market.

- TracPipe® CounterStrike® is up to 400 times more resistant to damage from electrical arcing than traditional CSST products.

*TracPipe® CounterStrike® is also:*

- The only CSST listed by both CSA and ICC Evaluation-Services-PMG 1058 and evaluated by the International Association of Plumbing and Mechanical Officials (IAPMO) ER 0227 for lightning resistance without additional bonding (unless required by local codes).
- Compliant with codes in all 50 states, with 16 years of proven field success it is the best gas piping product on the market today.
- Compliant with model codes, including the National Fuel Gas Code (NFPA 54), International Fuel Gas Code (IFGC) and the Uniform Plumbing Code (UPC).
- Listed to ANSI LC 1-2018 and Underwriters Laboratories (UL) listed for 1, 2 and 4 hour through penetration fire stop systems without removal of the conductive jacket.

CounterStrike® 25 ft coils are available in 1", 3/4", and 1/2" diameters.

TracPipe® CounterStrike® CSST is sized exactly the same as conventional yellow TracPipe CSST and uses the New AutoSnap® fitting.

**David Richardson**

RNC Manager for Weather Master Heating and Air Conditioning, Inc.

"After reviewing your newest addition to the TracPipe (fitting) family, I am excited about the convenience it will provide during installation. This product is another example of your dedication to providing quality products and looking for ways to make improvements and finding ways to make installation easier and more user friendly. I think that this new addition to your product line will be another reason that your product is the best in the market and contractors will be excited about the results."
